

## Section 7: Managing Services via CyberPanel Interface

The **CyberPanel Interface** provides a user-friendly dashboard for managing various server services, applications, and their statuses.

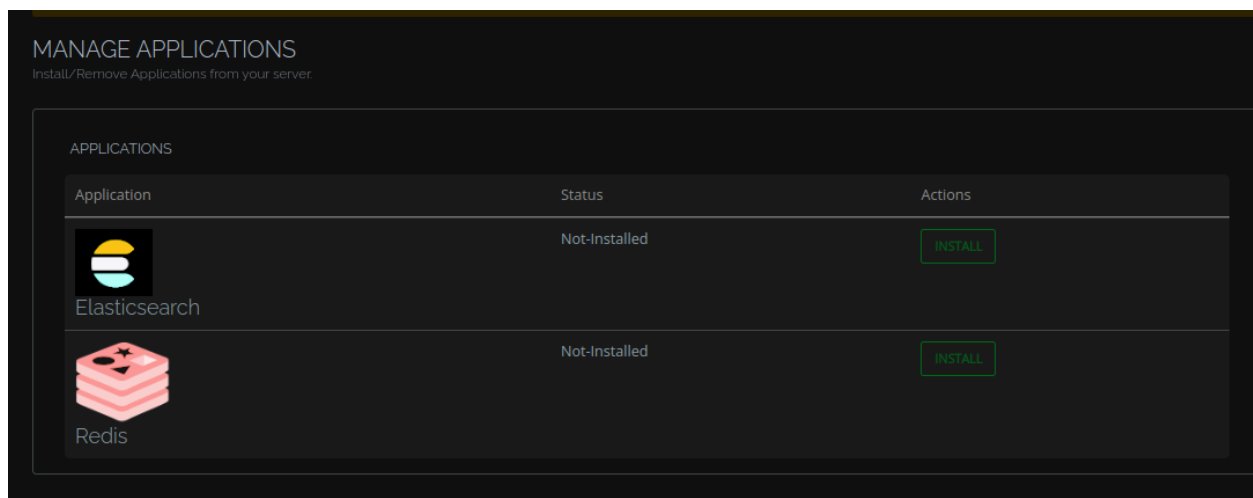

---

### 1. Applications Management

In CyberPanel, **Applications** refer to external softwares that can be installed.

Cyberpanel currently allows use of Redis and ElasticSearch applications.

To install, Go to Cyberpanel > Manage Services > Applications

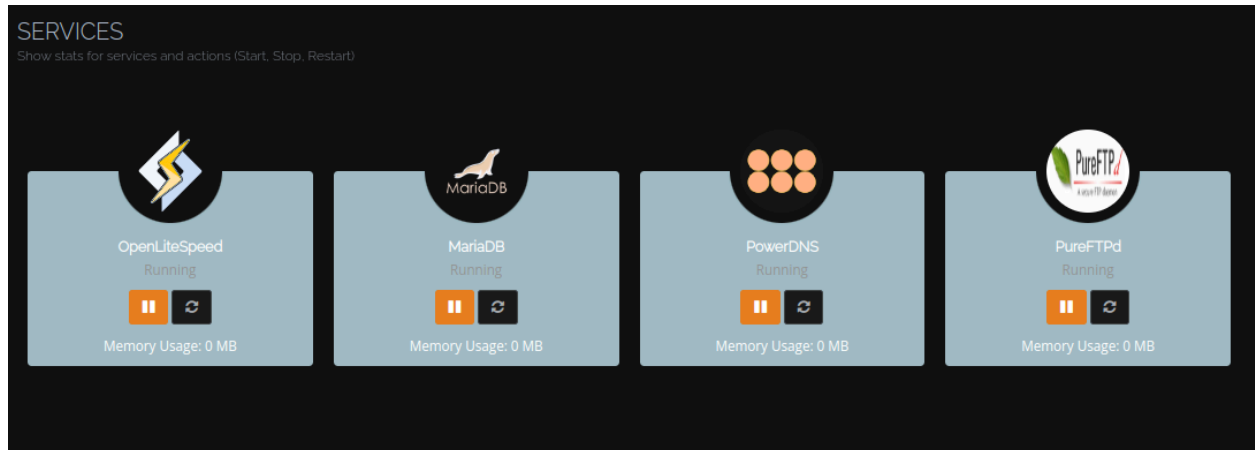

### 2. Services Status

Managing the status of services is essential for keeping your server running smoothly. CyberPanel provides an easy way to view, start, stop, and restart various services directly from the interface.

Services you can manage are **Litespeed, Mariadb, PureFTPd, PowerDNS**

**Go to Cyberpanel > Manage Services > Services**

- **Viewing Services Status:**

- From the dashboard, navigate to **Manage Services > Services** to see a list of all services running on your server, such as:

- **OpenLiteSpeed Web Server**
- **MariaDB (MySQL) Database Server**
- **PowerDNS**
- **Postfix (Mail Server)**
- **FTP Server**
