Account Registration and Verification

Email Address
Used for account setup and communication. Ensure access for verification emails.

Phone Number
Used SMS alerts Account verification. For contact purposes.

Physical Address
Required for billing and verification purposes.

Understanding the Hosting Dashboard

cPanel

- File Manager
- Email Accounts
- Databases
- Security (SSL, Password Management)

Plesk

- Websites and Domains
- Application Deployment
- DNS Configuration
- More

CyberPanel

- OpenLiteSpeed Server Management
- Website Creation
- Security Features
- More

Accessing the Control Panel

cPanel

Navigate to:

<https://yourdomain.com:2083>

Plesk

Navigate to:

<https://yourdomain.com:8443>

CyberPanel

Navigate to: <https://yourdomain.com:8090>

Use the login details provided via email after registration.

Domain Connection and DNS Setup

1

Log into the Client Area

2

Navigate to Domains > DNS Nameserver Management

3

Update Nameservers

Use the provided Truehost nameservers.

Example:

ns1.cloudoon.com,

ns2.cloudoon.net,

ns3.cloudoon.org

4

Propagate DNS Changes

Allow time for propagation to complete.

This may take 0-3 hours.

Testing DNS Propagation: Use online tools such as dnschecker.org.

DNS PROPAGATION

It takes 157 propagation the most time possible by a low fan air algorithm all giving them a role in DNS error resolution.

Email Account Setup

1

Creating Email Accounts

Log into cPanel/Plesk/CyberPanel. Navigate to the Email section. Click "Create New Email Account" and enter details.

2

Configuring Email Clients

Webmail: Access via <https://yourdomain.com/webmail>

3

Outlook and Gmail

Use IMAP/POP3 settings provided.

Installing CMS Using Auto-Installers

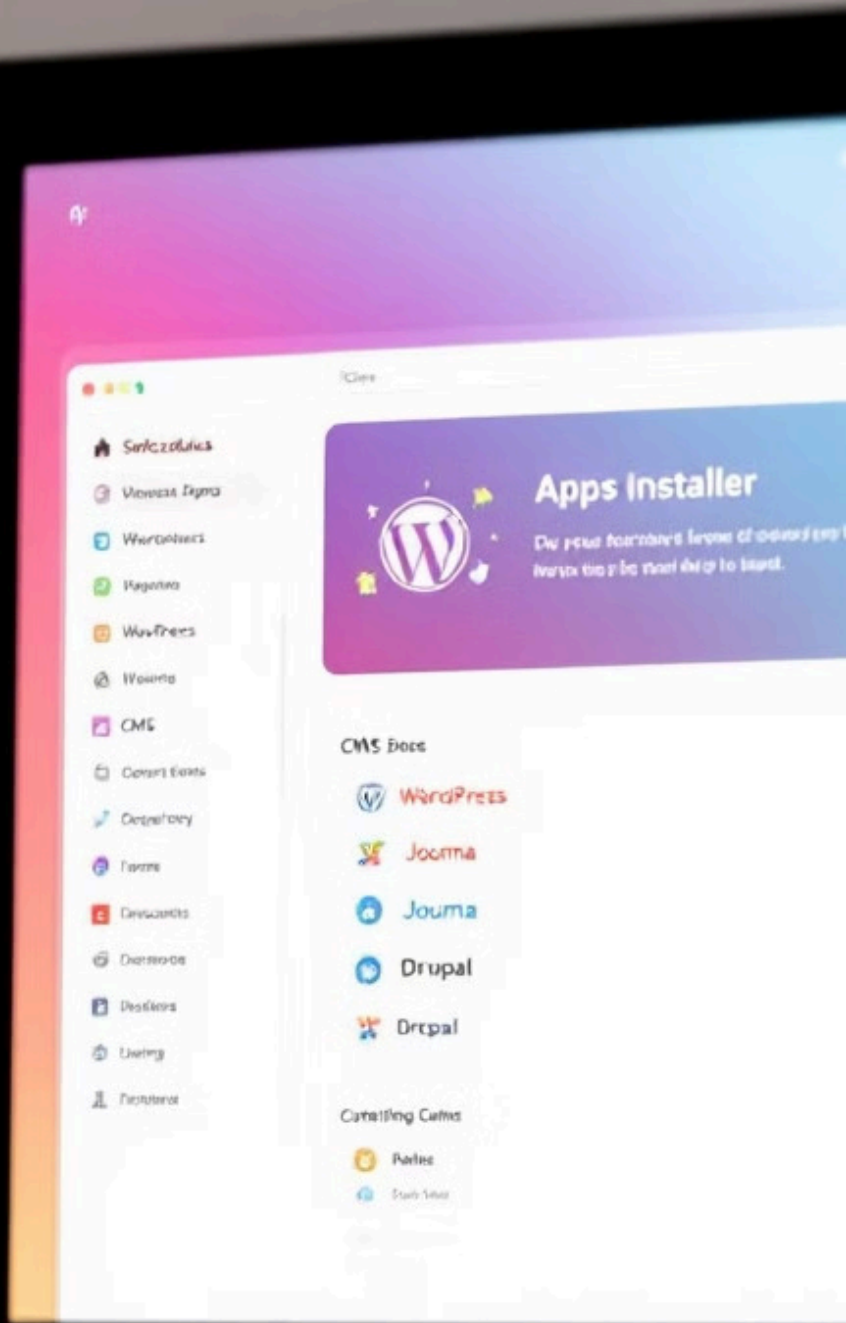

WordPress

Joomla

Drupal

1

Log into the hosting control panel

2

Navigate to "Softaculous Apps Installer"

3

Select the CMS to install

4

Configure site settings and click "Install"

Security Considerations

SSL Certificate Setup

1. Navigate to the "Security" section in the control panel.
2. Enable Let's Encrypt SSL or install a purchased SSL certificate.

Password Management

- Use strong, unique passwords.
- Enable two-factor authentication where available.

Conclusion

Account Setup Complete

You've successfully set up your hosting account and accessed key features.

Next Steps

Explore additional features and start building your website.
